### ***Is Your Additive Registered With EPA?***

#### ***EPA - U.S. Environmental Protection Agency***

Born in the wake of elevated concern about environmental pollution, the U.S. Environmental Protection Agency opened its doors in Washington, D.C., on December 2, 1970. EPA was established to consolidate in one agency a variety of federal research, monitoring, standard-setting and enforcement activities to ensure environmental protection. EPA's mission is to protect human health and to safeguard the natural environment—air, water, and land—upon which life depends. For more than 30 years, the EPA has been working for a cleaner, healthier environment.

#### ***Is Your Additive Registered?***

Quality additive manufacturers take their responsibility to environmental issues seriously. Registration with the EPA is a critical aspect for providing due diligence to consumers. Make sure your additive is registered before you buy.

#### ***Fuel additive manufacturer agrees to \$1.25 million fine***

Biofriendly Corp., Incorporated in Nevada with principal offices in Covina CA, has agreed to pay the Environmental Protection Agency (EPA) \$1.25 million for manufacturing and selling an unregistered fuel additive in Texas and California, according to EPA information.

"The fuel additive requirements of the Clean Air Act are a critical part of EPA's program to reduce air pollution," said Granta Nakayama, assistant administrator for EPA's Office of Enforcement and Compliance Assurance. "This is the largest penalty ever levied for violation of the Clean air Act's registration requirements for fuels and fuel additives."

Biofriendly sold "Green Plus," an unregistered fuel additive it claimed reduced emissions in diesel fuel, between September 2002 and May 2006. When Biofriendly discovered it was in violation, it stopped selling Green Plus domestically, EPA said in a news release.

The Clean Air Act requires that motor vehicle fuels and fuel additives meet stringent environmental standards before they can be distributed. Biofriendly failed to register Green Plus according to EPA procedures ensuring that fuel additives not increase emissions of harmful air pollutants or interfere with vehicle emission control devices. At a minimum, companies must provide EPA with information on the chemical composition and structure of the additive, and may also be requires to test products before obtaining EPA registration.

Biofriendly operates in the United States and internationally. The company manufactures, sells and distributes fuel additives and fuels that contain additives, according to EPA.

The agreement was lodged in the US District Court for the Central District of California, Western Division, and is subject to a 30-day public comment period and final court approval.
